Subject: Application for Programmer Analyst Intern – 2027 (Job ID: 10506542)

Dear Amazon Hiring Team,

I am writing to express my strong enthusiasm for the **Programmer Analyst Intern – 2027** position at Amazon Development Centre India (Job ID: 10506542). Amazon's commitment to building highly available, customer-centric infrastructure that scales globally is an engineering mission I am eager to contribute to. I confirm that I am available for full-time commitment during the entire duration of the internship with zero academic or external project conflicts, and I am fully prepared to submit the required university declaration of availability.

My engineering background directly aligns with the technical and operational focus of the Programmer Analyst role:

- **Core CS Fundamentals & Clean Coding (Java Preferred):** Grounded in algorithmic rigor, I have solved **1200+ DSA problems** across LeetCode, CodeChef, and GeeksforGeeks. I write clean, maintainable code in **Java**, C++, Python, and SQL, strictly following Object-Oriented Design and automated testing best practices.
- **AWS Cloud Technologies & Schedulers (AWS S3, DynamoDB, EC2):** As a certified **AWS Cloud Practitioner**, I understand core AWS architectures. In **DBVault**, I engineered an automated scheduling and backup system supporting multiple database engines. I designed background queue workflows and job state machines using **Redis and BullMQ**, implementing worker concurrency, distributed locking, and automated offloading to **AWS S3** with **120+ unit and integration tests**.
- **Troubleshooting Complex Code & Production Quality:** In my merged open-source contribution to **ESLint Core (PR #21218)**, I diagnosed and resolved a subtle floating-point underflow bug under IEEE 754 specifications within an abstract syntax tree (AST) engine. I developed rigorous regression test suites that passed **43 automated CI verification checks** prior to production merge.
- **Business-to-Technical Liaison & Internal Tool Automation:** As a Web Developer with Students Special Group, I developed an internal **Project Management Portal** and a **Faculty Reward Points Dashboard**. I acted as a direct liaison between non-technical academic stakeholders and developers to elicit, analyze, and validate functional requirements, replacing error-prone manual spreadsheets with automated workflows.

Amazon's Leadership Principles—particularly *Customer Obsession*, *Invent and Simplify*, *Ownership*, and *Deliver Results*—guide how I build software every day. I welcome the opportunity to work closely with Amazon's senior engineers and managers, support platform migrations, automate operational bottlenecks, and deliver high-impact technology solutions for Amazon's teams and customers.

Thank you for your time, consideration, and review of my application. I look forward to the possibility of discussing how my technical skills and operational passion can support Amazon's goals.

Sincerely,
Rithish S
